FPV DRONE RACING CHAMPIONSHIP

Race Format, Events & Technical Regulations

Championship Overview

The FPV Drone Racing Championship will feature three distinct racing events, progressing from indoor micro-drone racing to high-performance outdoor racing and advanced goggles-based FPV racing.

The championship will follow a MultiGP and FAI F9U-inspired competition structure, with each event consisting of:

Qualification → Seeding → Elimination Rounds → Final

Championship Events

1. WHOOP WARS — MultiGP Whoop Class | Indoor FPV Racing
2. AERO RUSH — MultiGP Open Class | Outdoor FPV Racing
3. FPV WARS: BLINDLINE — MultiGP Open Class | Outdoor Goggles-Based FPV Racing

EVENT 01 — WHOOP WARS

MultiGP Whoop Class | Indoor FPV Racing

1. Event Description

WHOOP WARS is an indoor FPV racing event based on the MultiGP Whoop Class, featuring small, lightweight ducted FPV quadcopters.

The course will consist of a technical indoor circuit incorporating gates, turns, obstacles and defined start/finish sections.

**Why Buy, When you can
BUILD ONE !**

The event focuses on:

- Precision
- Reaction time
- Technical manoeuvring
- Racing line
- Pilot control
- Consistency

2. Race Format

Qualification

Each pilot will complete individual timed qualification runs.

The pilot's best valid qualification performance will be recorded.

Qualification results will establish the official seed list for the elimination stage.

Fastest pilot = Seed #1

Second fastest = Seed #2

and so on.

Elimination

Pilots will be placed into multi-pilot heats according to their qualification seeding.

Depending on the number of participants, the elimination structure may be:

Round of 32 → Round of 16 → Quarter-Final → Semi-Final → Final

The bracket will be scaled according to the final number of registered pilots.

Final

The highest-performing pilots from the elimination rounds will compete in the final heat.

The final race result will determine the official:

1st Place → 2nd Place → 3rd Place

**Why Buy, When you can
BUILD ONE !**

3. WHOOP WARS — DRONE RESTRICTIONS

The aircraft specification will follow the MultiGP Whoop Class framework.

Parameter	Restriction
Class	MultiGP Whoop Class
Aircraft	Ducted FPV quadrotor
Maximum frame size	65 mm
Maximum propeller diameter	31 mm
Battery	1S LiPo
Maximum cell voltage	4.35 V
Motors	Brushed or brushless
Propeller ducts	Mandatory
Propeller material	Non-metallic
Autonomous flight	Prohibited
GPS-assisted racing	Prohibited
Payload	Prohibited

Additional Restrictions

- All propellers must be enclosed by ducts/guards.
- Propeller diameter shall not exceed 31 mm.
- Battery configuration shall be limited to 1S.
- Maximum charging voltage shall be 4.35 V per cell.
- No autonomous navigation.
- No GPS position hold or autonomous racing.
- No payloads or external attachments that create a safety hazard.
- Damaged or structurally compromised aircraft may be rejected.

Why Buy, When you can
BUILD ONE !

EVENT 02 — AERO RUSH

MultiGP Open Class | Outdoor FPV Racing

1. Event Description

AERO RUSH is the championship's high-speed outdoor FPV racing event based on the MultiGP Open Class concept.

Pilots will compete using high-performance 5-inch FPV racing quadcopters on a dedicated outdoor circuit.

The track may incorporate:

- High-speed straights
- Technical corners
- Racing gates
- Elevation changes
- Chicanes
- Hairpins
- Start/finish sections

The event focuses on:

- Speed
- Racing line
- Cornering
- Overtaking
- Reaction time
- Tactical racing
- Pilot consistency

2. Race Format

Qualification

Each pilot will complete an individual timed qualification flight.

The best valid qualifying performance will determine the pilot's position on the qualification leaderboard.

The leaderboard establishes the elimination seed.

**Why Buy, When you can
BUILD ONE !**

Elimination

Pilots will compete in multi-pilot heats.

The proposed structure is:

Round of 32

Round of 16

Quarter-Final

Semi-Final

Final

The number of stages will be adjusted according to the number of registered pilots.

Pilots achieving the required qualifying position in each heat will advance to the next stage.

Final

The finalists will compete in the championship final.

The official final-race result will determine the podium.

3. AERO RUSH — DRONE RESTRICTIONS

The event will use a 5-inch Open Class racing configuration.

Why Buy, When you can **BUILD ONE !**

Parameter	Restriction
Class	MultiGP Open Class
Aircraft configuration	Quadrotor
Number of motors	4
Propeller class	5-inch
Maximum propeller diameter	5.0 inch
Frame	Open
Motors	Open
ESC	Open
Flight controller	Open
FPV system	Open
Battery	Maximum 6S LiPo
Propellers	Non-metallic
Autonomous flight	Prohibited
GPS-assisted racing	Prohibited
Autonomous navigation	Prohibited
Payload	Prohibited

Propulsion

- Maximum of four propulsion motors.
- Maximum propeller diameter: 5.0 inches.
- Electric propulsion only.
- Metal propellers are prohibited.
- Damaged or cracked propellers are prohibited.

Battery

- Maximum battery configuration: 6S LiPo.
- Battery must be securely mounted.
- Damaged, swollen or physically compromised batteries are prohibited.

**Why Buy, When you can
BUILD ONE !**

Flight Control

The aircraft must remain under active pilot control throughout the race.

The following are prohibited:

- Autonomous flight
- Autonomous navigation
- Waypoint navigation
- GPS position hold
- Autonomous obstacle avoidance
- Automated racing
- AI-based autonomous flight control

EVENT 03 — FPV WARS: BLINDLINE

MultiGP Open Class | Outdoor Goggles-Based FPV Racing

1. Event Description

FPV WARS: BLINDLINE is the advanced goggles-based FPV racing event of the championship.

The aircraft specification will follow the same 5-inch Open Class configuration used for AERO RUSH.

The defining characteristic of BLINDLINE is the pilot's operation of the aircraft through a real-time FPV goggles/headset-based view.

The event is designed to test:

- Immersive FPV control
- High-speed reaction
- Spatial awareness
- Racing line selection
- Precision
- Pilot confidence
- Consistency under high-speed conditions

**Why Buy, When you can
BUILD ONE !**

2. Race Format

Qualification

Each pilot will complete an individual timed qualification flight using the FPV goggles/headset system.

The best valid qualification performance will determine the pilot's seed.

Elimination

Pilots will compete in multi-pilot elimination heats.

Proposed structure:

Round of 32 → Round of 16 → Quarter-Final → Semi-Final → Final

The bracket will be scaled according to the number of participants.

Final

The highest-performing pilots will compete in the BLINDLINE championship final.

The final result will determine:

BLINDLINE Champion → Runner-Up → Third Place

3. BLINDLINE — DRONE RESTRICTIONS

Parameter	Restriction
Class	MultiGP Open Class
Aircraft configuration	Quadrotor
Number of motors	4
Propeller class	5-inch
Maximum propeller diameter	5.0 inch
Frame	Open
Motors	Open
ESC	Open
Flight controller	Open

Why Buy, When you can **BUILD ONE !**

FPV system	Open
Battery	Maximum 6S LiPo
Propellers	Non-metallic
Autonomous flight	Prohibited
Autonomous navigation	Prohibited
GPS-assisted racing	Prohibited
Payload	Prohibited

FPV System

- FPV goggles/headset shall be used as the primary pilot-view system.
- Analog or digital FPV systems may be permitted.
- Video frequency/channel will be assigned by the race officials.
- VTX power shall remain within the event-prescribed limit.
- Pilots may not change video channels during a heat without authorisation.
- Intentional video interference is prohibited.

Flight Control

The aircraft must remain under direct pilot control throughout the race.

The following are prohibited:

- Autonomous flight
- Autonomous navigation
- Waypoint navigation
- GPS position hold
- Autonomous obstacle avoidance
- Automated racing
- AI-based autonomous control

**Why Buy, When you can
BUILD ONE !**

4. COMMON DRONE RESTRICTIONS

The following restrictions apply to all three championship events unless specifically modified by the individual event regulations.

Aircraft

- Aircraft must be electric-powered.
- Aircraft must comply with the applicable event class.
- Aircraft must be in safe operating condition.
- No hazardous payloads.
- No weaponised systems.
- No intentional aircraft-to-aircraft interference.

Propellers

- Propellers must comply with the applicable class specification.
- Damaged or cracked propellers are prohibited.
- Metal propellers are prohibited.

Batteries

- Battery configuration must comply with the applicable class.
- Batteries must be securely mounted.
- Damaged, swollen or physically compromised batteries are prohibited.

Radio Systems

- Radio systems must operate within permitted frequency bands.
- Race officials may assign channels/frequencies.
- Pilots may not change assigned channels during a heat without authorisation.
- Fail-safe functionality must be operational.

FPV Video Systems

- Video channels will be coordinated by the race officials.
- Transmitter power must remain within the event-prescribed limit.
- Intentional interference with another pilot's video signal is prohibited.
- Unauthorised frequency changes are prohibited during racing.

*Why Buy, When you can
BUILD ONE !*

Autonomous Systems

Unless specifically authorised by the competition rules:

Autonomous flight and autonomous racing systems are prohibited.

The aircraft must remain under active pilot control throughout the race.

5. CHAMPIONSHIP RACE PROGRESSION

All three events will use the same fundamental competition architecture.

STAGE 1 — QUALIFICATION

Individual timed flight

STAGE 2 — SEEDING

Qualification results determine pilot ranking

STAGE 3 — ELIMINATION

Multi-pilot heats

Round of 32

Round of 16

Quarter-Final

Semi-Final

Why Buy, When you can
BUILD ONE !

STAGE 4 — CHAMPIONSHIP FINAL

Final multi-pilot race

OFFICIAL RESULTS

1st Place | 2nd Place | 3rd Place
